Outpatient Antibiotic Stewardship

Crystal David, PharmD, BCPS
Clinical Assistant Professor
OSU-CHS Department of Family Medicine
Crystal.David@okstate.edu
May 2020
Financial Disclosures

• None
Objectives

• Identify opportunities and barriers for improving outpatient prescribing and use

• Discuss CDC’s Core Elements of Outpatient Antibiotic Stewardship

• Evaluate the evidence regarding outpatient antimicrobial stewardship interventions and initiatives

• Identify effective antibiotic stewardship interventions to improve outpatient antibiotic prescribing
Background
Antibiotic Stewardship

“Antibiotic stewardship is the systematic effort to improve antibiotic use to improve patient outcomes in order to help patients and combat antibiotic resistance.”

CDC. 2017 Antibiotic Use in the United States: Progress and Opportunities
PO Antibiotic Prescriptions by Specialty

- Primary Care Physicians: 43%
- PA/NP: 14%
- Surgery: 9%
- Dentistry: 8%
- Emergency: 5%
- Other: 21%

Outpatient Antibiotic Use Statistics

National Ambulatory Medical Care Survey
National Hospital Ambulatory Medical Care Survey

30% antibiotic prescriptions were unnecessary
• not indicated

50% inappropriate
• not indicated or incorrect antibiotic selection

Another Outpatient Abx Study

Chua KP, Fischer MA, Linder JA. BMJ 2019
Question 1

A 25 year-old non-pregnant female presents to your clinic with dysuria.
Denies: fever, chills, flank pain

Which antibiotic is the best option to treat her uncomplicated UTI? (NKDA; CrCl=125 mL/min)

a. Ciprofloxacin
b. Nitrofurantoin
c. Trimethoprim-sulfamethoxazole
d. Amoxicillin
Question 2

A 69 year old male presents to clinic with fever, cough, SOB for three days.

Findings on CXR are consistent with CAP

PMH: hypertension and hyperlipidemia
NKDA

What is your antibiotic treatment plan for this patient?
Question 3

SP is a 54 YOF who presents to clinic with new onset cough for 6 days

- nonpurulent sputum production
- SOB
- Afebrile
- HR = 80 bpm
- RR = 18

You diagnose her with acute bronchitis. What is your antibiotic treatment plan for this patient?
Question 1

A 25 year-old non-pregnant female presents to your clinic with dysuria.

Denies: fever, chills, flank pain

Which antibiotic is the best option to treat her uncomplicated UTI? (NKDA; CrCl=125 mL/min)

a. Ciprofloxacin
b. Nitrofurantoin
c. Trimethoprim-sulfamethoxazole
d. Amoxicillin
FDA determined that fluoroquinolones should be reserved for use in patients with these conditions who have no alternative treatment options:

• acute bacterial sinusitis
• acute bacterial exacerbation of chronic bronchitis
• uncomplicated urinary tract infections

FQN are the ONLY oral antibiotics with pseudomonas coverage.
# Treatment – Uncomplicated Cystitis

<table>

Tracking & Reporting

https://www.cdc.gov/antibiotic-use/community/improving-prescribing/core-elements/core-outpatient-stewardship.html
Clinician Checklist for Core Elements of Outpatient Antibiotic Stewardship

CDC recommends that outpatient clinicians take steps to implement antibiotic stewardship activities. Use this checklist as a baseline assessment of policies and practices that are in place. Then use the checklist to review progress in expanding stewardship activities on a regular basis (e.g., annually).

**COMMITMENT**

1. Can you demonstrate dedication to and accountability for optimizing antibiotic prescribing and patient safety related to antibiotics?  
   - Yes  
   - No
   
   If yes, indicate which of the following are in place (select all that apply):
   - Write and display public commitments in support of antibiotic stewardship.

**ACTION**

2. Have you implemented at least one practice to improve antibiotic prescribing?  
   - Yes  
   - No
   
   If yes, indicate which practices which you use. (Select all that apply):
   - Use evidence-based diagnostic criteria and treatment recommendations.
   - Use delayed prescribing practices or watchful waiting, when appropriate.

**TRACKING AND REPORTING**

3. Do you monitor at least one aspect of antibiotic prescribing?  
   - Yes  
   - No
   
   If yes, indicate which of the following are being tracked. (Select all that apply):
   - Evaluate antibiotic prescribing practices.
   - Participate in continuing medical education and quality improvement activities to track and improve antibiotic prescribing.

**EDUCATION AND EXPERTISE**

4. Do you provide education to patients and seek out continuing education on antibiotic prescribing?  
   - Yes  
   - No
   
   If yes, indicate how you provide antibiotic stewardship education. (Select all that apply):
   - Use effective communications strategies to educate patients about when antibiotics are and are not needed.
   - Educate about the potential harms of antibiotic treatment.
   - Provide patient education materials.

Commitment

- Education & Expertise
- Outpatient Stewardship
- Tracking & Reporting
- Action

https://www.cdc.gov/antibiotic-use/community/improving-prescribing/core-elements/core-outpatient-stewardship.html
Commitment

Can you demonstrate dedication to and accountability for optimizing antibiotic prescribing and patient safety related to antibiotics?

Write and display public commitments in support of antibiotic stewardship

Example: Poster containing a public commitment to use antibiotics appropriately

• Include clinician picture and signature
• Display in patient exam rooms

A Commitment to Our Patients About Antibiotics

Antibiotics only fight infections caused by bacteria. Like all drugs, they can be harmful and should only be used when necessary. Taking antibiotics when you have a virus can do more harm than good: you will still feel sick and the antibiotic could give you a skin rash, diarrhea, a yeast infection, or worse.

Antibiotics also give bacteria a chance to become more resistant to them. This can make future infections harder to treat. It means that antibiotics might not work when you really do need them. Because of this, it is important that you only use an antibiotic when it is necessary to treat your illness.

How can you help? When you have a cough, sore throat, or other illness, tell your doctor you only want an antibiotic if it is really necessary. If you are not prescribed an antibiotic, ask what you can do to feel better and get relief from your symptoms.

Your health is important to us. As your healthcare providers, we promise to provide the best possible treatment for your condition. If an antibiotic is not needed, we will explain this to you and will offer a treatment plan that will help. We are dedicated to prescribing antibiotics only when they are needed, and we will avoid giving you antibiotics when they might do more harm than good.

If you have any questions, please feel free to ask us.

Sincerely,

To learn more about antibiotic prescribing and use, visit www.cdc.gov/antibiotic-use.
Action

Have you implemented at least one practice to improve antibiotic prescribing?

Use evidence-based diagnostic criteria and treatment recommendations

Use national guidelines (e.g., IDSA) along with local pathogen susceptibilities to guide antibiotic choices

Symptom Relief for Viral Illnesses

1. DIAGNOSIS
   - Cold or cough
   - Middle ear fluid (Otitis Media with Effusion, OME)
   - Flu
   - Viral sore throat
   - Bronchitis
   - Other:

You have been diagnosed with an illness caused by a virus. Antibiotics do not work on viruses. When antibiotics aren’t needed, they won’t help you and the side effects could still hurt you. The treatments prescribed below will help you feel better while your body fights off the virus.

2. GENERAL INSTRUCTIONS
   - Drink extra water and fluids.
   - Use a cool mist vaporizer or saline nasal spray to relieve congestion.
   - For sore throats in older children and adults, use ice chips, sore throat spray, or lozenges.
   - Use honey to relieve cough. Do not give honey to an infant younger than 1.

3. SPECIFIC MEDICINES
   - Fever or aches:
   - Ear pain:
   - Sore throat and congestion:

Use medicines according to the package instructions or as directed by your healthcare professional. Stop the medication when the symptoms get better.

4. FOLLOW UP
   - If not improved in ___ days/hours, if new symptoms occur, or if you have other concerns, please call or return to the office for a recheck.

   - Phone:
   - Other:

Signed: __________________________

To learn more about antibiotic prescribing and use, visit www.cdc.gov/antibiotic-use.
Action

Have you implemented at least one practice to improve antibiotic prescribing?

Use delayed prescribing practices or watchful waiting when appropriate

• Delayed prescriptions and watchful waiting were both effective at reducing antibiotic prescriptions

WAIT. DO NOT FILL YOUR PRESCRIPTION JUST YET.

Your healthcare professional believes your illness may resolve on its own. First, follow your healthcare professional’s recommendations to help you feel better without antibiotics. Continue to monitor your symptoms over the next few days.

✓ Rest.

✓ Drink extra water and fluids.

☐ Use a cool mist vaporizer or saline nasal spray to relieve congestion.

✓ For sore throats in adults and older children, try ice chips, sore throat spray, or lozenges.

☐ Use honey to relieve cough. Do not give honey to an infant younger than 1.

If you do not feel better in 4 days/hours or feel worse, go ahead and fill your prescription.

If you feel better, you do not need the antibiotic, and do not have to risk the side effects.

Waiting to see if you really need an antibiotic can help you take antibiotics only when needed. When antibiotics aren’t needed, they won’t help you, and the side effects could still hurt you. Common side effects of antibiotics can include rash, dizziness, nausea, diarrhea, and yeast infections.

Antibiotics save lives, and when a patient needs antibiotics, the benefits outweigh the risks of side effects. You can protect yourself and others by learning when antibiotics are and are not needed.

To learn more about antibiotic prescribing and use, visit www.cdc.gov/antibiotic-use.

https://www.cdc.gov/antibiotic-use/community/pdfs/aaw/CDC-AU_RCx_Delayed_Prescribing_sm_v9_508.pdf
Tracking and Reporting

Do you monitor at least one aspect of antibiotic prescribing?

Self-evaluate antibiotic prescribing practices

- Providers can evaluate themselves and align their prescribing habits with practice guidelines
- Peer comparison

Tracking and Reporting

Do you monitor at least one aspect of antibiotic prescribing?

Participate in continuing medical education and quality improvement activities to track and improve antibiotic prescribing

- Can be conducted through health professional activities, CME courses, CDC Train

CDC's Antibiotic Stewardship Training Series

Web-based self study
9 Modules
CE is available

https://www.train.org/cdctrain/training_plan/3697
Outpatient Stewardship Commitment

- Education & Expertise
- Tracking & Reporting

Action

https://www.cdc.gov/antibiotic-use/community/improving-prescribing/core-elements/core-outpatient-stewardship.html
Education and Expertise

Do you provide education to patients and seek out continuing education on antibiotic prescribing?

Use effective communication strategies to educate patients about when antibiotics are and are not needed.

Dialogue Around Respiratory Illness Treatment (DART) – CDC Training Module 6

- Negative treatment recommendation plus positive treatment recommendation with a contingency plan resulted in **85% reduction** in risk of prescribing antibiotics.

What does this look like?

“You’ve come down with a viral video.”
What does this look like?

For your sore throat you can try lozenges, sore throat spray and salt water gargles to help with the pain.

This looks like a virus. Antibiotics won’t help you feel better faster when you have a virus.
Do you provide education to patients and seek out continuing education on antibiotic prescribing?

Educate about the potential harms of antibiotic treatment

A study of parents of pediatric parents concluded that parents are interested in information on antibiotic associated ADEs while adult patients may be less receptive.

Improving Antibiotic Use

Be Antibiotics Aware
Smart Use, Best Care

Do I really need antibiotics?

Say Yes to Antibiotics
When needed for certain infections caused by bacteria.

Say No to Antibiotics
For viruses, such as colds and flu, or runny noses, even if the mucus is thick, yellow, or green. Antibiotics also won't help for some common bacterial infections including most cases of bronchitis, many sinus infections, and some ear infections.

Antibiotics are only needed for treating certain infections caused by bacteria. Antibiotics do not work on viruses.

Do antibiotics have side effects?

Anytime antibiotics are used, they can cause side effects. When antibiotics aren't needed, they won't help you, and the side effects could still hurt you. Common side effects of antibiotics can include:

- Rash
- Dizziness
- Nausea
- Yeast Infections
- Diarrhea

More serious side effects include Clostridium difficile infection (also called C. difficile) which causes diarrhea that can lead to severe colon damage and death. People can also have severe and life-threatening allergic reactions.

Antibiotics save lives. When a patient needs antibiotics, the benefits outweigh the risks of side effects.

1 out of 5 medication-related visits to the ED are from reactions to antibiotics.

What are antibiotic-resistant bacteria?

Antibiotic resistance occurs when bacteria no longer respond to the drugs designed to kill them. Anytime antibiotics are used, they can cause antibiotic resistance.

Bacteria, not the body, become resistant to the antibiotics designed to kill them.

When bacteria become resistant, antibiotics cannot fight them, and the bacteria multiply.

Some resistant bacteria can be harder to treat and can spread to other people.

More than 2.8 million antibiotic resistant infections occur in the United States each year, and more than 35,000 people die as a result.

Can I feel better without antibiotics?

Respiratory viruses usually go away in a week or two without treatment. To stay healthy and keep others healthy, you can:

- Clean Hands
- Cover Coughs
- Stay Home When Sick
- Get Recommended Vaccines

To learn more about antibiotic prescribing and use, visit www.cdc.gov/antibiotic-use.

Education and Expertise

Do you provide education to patients and seek out continuing education on antibiotic prescribing?

Provide patient education materials

- Not much evidence supporting patient education materials alone
- Educate patient on subject matter

Preventing and Treating Bronchitis

Cough keeping you up at night? Soreness in your chest and feeling tired? You could have acute bronchitis, but be aware: an antibiotic will not help you get better.

What is Acute Bronchitis?
Bronchitis occurs when the airways of the lungs swell and produce mucus. That's what makes you cough. Acute bronchitis, often called a "chest cold," is the most common type of bronchitis. The symptoms last less than 3 weeks. If you're a healthy person without underlying heart or lung problems or a weakened immune system, this information is for you.

Symptoms
- Coughing with or without mucus production
- Soreness in the chest
- Fatigue (feeling tired)
- Mild headache
- Mild body aches
- Watery eyes
- Sore throat

Causes
Acute bronchitis is usually caused by a virus and often occurs after an upper respiratory infection. Bacteria can sometimes cause acute bronchitis, but even in these cases antibiotics are NOT recommended and will not help you get better.

When to Seek Medical Care
See a healthcare professional if you or your child have any of the following:
- Temperature of 100.4°F or higher
- Cough with bloody mucus
- Shortness of breath or trouble breathing
- Symptoms that last more than 3 weeks
- Repeated episodes of bronchitis.

Treatment
Acute bronchitis usually gets better on its own — without antibiotics. Antibiotics won't help you get better if you have acute bronchitis.

When antibiotics aren't needed, they won't help you, and the side effects could still cause harm. Side effects can range from minor issues, like a rash, to very serious health problems, such as antibiotic resistant infections and C. diff infection, which causes diarrhea that can lead to severe colon damage and death.

If you have whooping cough (paroxysmal or pneumonia, which can have similar symptoms to acute bronchitis, your doctor will most likely prescribe antibiotics.

How to Feel Better
- Get plenty of rest.
- Drink plenty of fluids.
- Use a clean humidifier, cool mist vaporizer, or saline nose drops to relieve a stuffy nose.
- For young children, use a rubber suction bulb to clear mucus.
- Breathe in steam from a bowl of hot water or shower.
- Suck on lozenges. Do not give lozenges to children younger than 4 years old.
- Use honey to relieve cough for persons at least 1 year old.
- Ask your doctor or pharmacist about over-the-counter medicines that can help you feel better. Always use over the-counter medicines as directed. Remember, over-the-counter medicines may provide temporary relief of symptoms, but they will not cure your illness.

Remember, always use over the counter medicines as directed. Be careful about giving over the-counter medicines to children. Not all over the-counter medicines are recommended for children of certain ages.

- Pain relievers:
  - Babies 6 months or younger: only give acetaminophen.
  - Children 6 months or older: it is OK to give acetaminophen or ibuprofen.
  - Never give aspirin to children because it can cause Reyes syndrome, a rare but very serious illness that harms the liver and brain.

- Cough and cold medicines:
  - Children younger than 4 years old: do not use unless a doctor specifically tells you to. Misuse of over the-counter cough and cold medicines in young children can result in serious and potentially life-threatening side effects.
  - Children older than 4 years old: discuss with your child's doctor if over-the-counter cough and cold medicines are safe to give to your child for temporary symptom relief.

Prevention
- Practice good hand hygiene.
- Make sure you and your child are up-to-date with all recommended vaccines.
- Don't smoke and avoid secondhand smoke, chemicals, dust, or air pollution.
- Always cover your mouth and nose when coughing or sneezing.
- Keep your distance from others when you are sick, if possible.

Antibiotics will not treat acute bronchitis. Using antibiotics when not needed could do more harm than good.
Facility Checklist for Core Elements of Outpatient Antibiotic Stewardship

CDC recommends that outpatient care facilities take steps to implement antibiotic stewardship activities. Use this checklist as a baseline assessment of policies and practices that are in place. Then use the checklist to review progress in expanding stewardship activities on a regular basis (e.g., annually).

**COMMITMENT**

1. Can your facility demonstrate dedication to and accountability for optimizing antibiotic prescribing and patient safety related to antibiotics?
   - Yes
   - No
   - If you indicate which of the following are in place, select all that apply.
   - Identify a single leader to direct antibiotic stewardship activities within a facility.
   - Include antibiotic stewardship-related duties in positive descriptions or job evaluation criteria.
   - Communicate with all clinic staff members to set patient expectations.

**ACTION**

2. Has your facility implemented at least one policy or practice to improve antibiotic prescribing?
   - Yes
   - No
   - If you indicate which interventions are in place, select all that apply.
   - Provide communications skills training for clinicians.
   - Require explicit written justification in the medical record for nonrecommended antibiotic prescribing.
   - Provide support for clinical decisions.
   - Use call centers, nurse hotlines, or pharmacist consultations as triage systems to prevent unnecessary visits.

**TRACKING AND REPORTING**

3. Does your facility monitor at least one aspect of antibiotic prescribing?
   - Yes
   - No
   - If you indicate which of the following are being tracked, select all that apply.
   - Track and report antibiotic prescribing for one or more high-priority conditions.
   - Track and report the percentage of all visits leading to antibiotic prescriptions.
   - (If already tracking and reporting one of the above) Track and report, at the level of a health care system, complications of antibiotic use and antibiotic resistance trends among common outpatient bacterial pathogens.
   - Assess and share performance on quality measures and established reduction goals addressing appropriate antibiotic prescribing from health care plans and payers.

**EDUCATION AND EXPERTISE**

4. Does your facility provide resources to clinicians and patients on evidence-based antibiotic prescribing?
   - Yes
   - No
   - If you indicate how your facility provides antibiotic stewardship education, select all that apply.
   - Provide face-to-face educational training (academic detailing).
   - Provide continuing education activities for clinicians.
   - Ensure timely access to persons with expertise.

Commitment

1. Can your facility demonstrate dedication to and accountability for optimizing antibiotic prescribing and patient safety related to antibiotics?

*Identify a single leader to direct antibiotic stewardship activities within a facility*

- Core elements states successful hospital ASP programs have utilized a physician leader
- Leader can be a pharmacist

Commitment

1. Can your facility demonstrate dedication to and accountability for optimizing antibiotic prescribing and patient safety related to antibiotics?

Include antibiotic stewardship-related duties in position descriptions or job evaluation criteria

Communicate with all clinic staff members to set patient expectations

- Staff should use consistent messages when communicating with patients

2. Has your facility implemented at least one policy or practice to improve antibiotic prescribing?

Provide communication skills training for clinicians

- Dialogue Around Respiratory Illness Treatment (DART) – Reviewed in Communication Training Module 6 of CDC Training on Antibiotic Stewardship

- Active training tends to be more effective than passive
2. Has your facility implemented at least one policy or practice to improve antibiotic prescribing?

Require explicit written justification in the medical record for non-recommended antibiotic prescribing

- Provider education and written justification in chart decreased antibiotic prescriptions 18% compared to 11% with education alone

Action

2. Has your facility implemented at least one policy or practice to improve antibiotic prescribing?

Provide support for clinical decisions

- Use of clinical prediction rule in EHR
  - Ex: Walsh rule for streptococcal sore throat and Heckerling rule for pneumonia
    - NNT to prevent one antibiotic prescription was 10.8
    - Must develop the process around the user and educate providers on how to use...

Action

2. Has your facility implemented at least one policy or practice to improve antibiotic prescribing?

Use call centers, nurse hotlines, or pharmacist consultations as triage systems to prevent unnecessary visits

- Use of nursing advice hotline to optimize self-care of URIs resulted in self-care in 88% of initial advice calls
3. Does your facility monitor at least one aspect of antibiotic prescribing?

Track and report antibiotic prescribing for one or more high-priority conditions

- Includes UTIs, sinusitis, bronchitis and other respiratory infections where antibiotics are prescribed unnecessarily

Tracking and Reporting

3. Does your facility monitor at least one aspect of antibiotic prescribing?

Track and report the percentage of all visits leading to antibiotic prescriptions

- Track all visits – this may lead to identifying providers who are diagnosis shifting (clinician manipulates diagnostic code to justify prescribing antibiotic)

Tracking and Reporting

3. Does your facility monitor at least one aspect of antibiotic prescribing?

(If already tracking and reporting one of the above) Track and report, at the level of a health care system, complications of antibiotic use resistance trends among common outpatient bacterial pathogens

- Investigate Clostridioides difficile infections for possible links to ambulatory care visits
- Review antibiotic drug interactions and adverse drug events
- Utilize lab and infection prevention personnel to analyze resistance trends

3. Does your facility monitor at least one aspect of antibiotic prescribing?

Assess and share performance on quality measures and established reduction goals addressing appropriate antibiotic prescribing from health care plans and payers

- The National Strategy for Combating Antibiotic-Resistant Bacteria aims to reduce inappropriate use 50% for monitored conditions in outpatient settings by 2020
- Current Healthcare Effectiveness Data and Information Set (HEDIS) measures
- Merit-based Incentive Payment System (MIPS)

Education and Expertise

4. Does your facility provide resources to clinicians and patients on evidence-based antibiotic prescribing?

Provide face-to-face educational training (academic detailing)
- Interactive and case-based education for clinicians reduced antibiotic prescribing 24.6%
- Peer comparison

4. Does your facility provide resources to clinicians and patients on evidence-based antibiotic prescribing?

Provide continuing education activities for clinicians

- Training should provide appropriate antibiotic prescribing, adverse drug events, and communication strategies to improve patient satisfaction

Education and Expertise

4. Does your facility provide resources to clinicians and patients on evidence-based antibiotic prescribing?

Ensure timely access to persons with expertise

- Pharmacists can assist clinicians in selecting appropriate antibiotic therapy
- Pharmacists have been associated with improved patient outcomes and overall cost savings in hospital stewardship programs

Considerations

• Are you part of a larger health system or an independent practice?
• Do you have collaboration with a pharmacist, other physicians, microbiology lab, etc.?
• Do you work in Primary Care, Urgent Care, ED?
Intervention Types

• Indication-specific
  • Available guidelines to guide appropriate use
  • Problematic if no indication is required in EMR

• Medication-specific
  • Identifies targeted antimicrobial reduction interventions
  • Some meds may have other uses outside of ID

• Bug-specific
  • May not have access to many outpatient cultures

• Provider-specific
  • Concentrate on looking at high-prescribers
  • Create a general ASP plan and include peer comparison
Outpatient ASP Core Elements Checklist

✓ Combination of interventions are more effective than single interventions

✓ Interventions targeting decreases in overall antibiotic prescriptions were more often effective than interventions targeting improvements in antibiotic selection

✓ Using EHR clinical decision support systems improves antibiotic selection – develop the process around the user and educate providers on how to use it

✓ Educate parents on antibiotic use including possible adverse effects

✓ No single intervention is recommended for all settings

✓ Clinician education should be interactive, not passive, and include communication skills
Outpatient Antibiotic Stewardship

Crystal David, PharmD, BCPS
Clinical Assistant Professor
